

Class-wide discussion

Learning outcomes:

LO1: Recognize the fundamentals of data science.

LO2: Discuss the value of data science in a particular domain.

Title: How is data science applied in your domain?

Content to appear on the OLC:

In this unit, you learned about the basic components of data science and how it is applied in several domains, such as marketing, sales, and risk management.

Share your experience with data science, or the way you envision it contributing to your domain, by answering the following questions:

- Where is data science applied in your industry, or where could it be applied?
- What value could be derived from the application of data science in your domain, and how could it potentially shape the workflow of your business environment?
