

Class-wide discussion

Learning outcome:

LO1: Recognize how this program could help you to create a more intelligent organization.

Title: What is your vision for your organization in how it can better leverage AI technologies?

Content to appear on the OLC:

In this unit's video, Professor Malone frames the program's core research question as: "How can people and computers be connected so that – collectively – they act more intelligently than any person, group or computer has ever done before?"

For this class-wide discussion, consider Professor Malone's explanation of collective intelligence as well as the ways in which you will be different after completing this program. Share your thoughts on the following questions with your peers:

- What are your reasons for taking this program and what do you hope to achieve by completing it?
- How do you hope to digitally transform your organization and make it more intelligent by using AI?

Join the discussion.

Reminder:

Your discussions present an opportunity for collaborative, exploratory learning. It is recommended that you keep your discussion posts short and succinct (**no more than 200 words**) to encourage fluid discussions.

Over the coming weeks, you may connect strongly with the views and ideas shared by some of your fellow participants in the discussions. You can reach out to participants with whom you would like to continue your discussion by using the meetup forum in the "Announcements and resources" on the Online Learning Campus.
